

“ Renier Construction cared about our opinions throughout the entire process.

They were sensitive to our daily business and operational needs. We had to build within a small footprint and Renier worked within the job constraints.

We presented the team with unique challenges for traffic flow and customer parking. Now those things blend into the entire building while also meeting requirements from the city and from Honda.

Our finished facility truly ranks right at the top from a quality and features standpoint. **The mix of design recommendations and choice of materials resulted in a fantastic build. ”**
